DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 31-34, 36-38, 40-47, 54-55 wherein Ar is pyridyl, drawn to pyridines, classified in classes 514, 546, subclasses various.
 - II. Claims 35, 39 and claims 31-32, 36-47, 54-55 wherein Ar is carbocyclic ring, drawn to coumarines, classified in classes 514, 549, subclasses various.
 - III. Claims 31-34, 36-38, 40-47, 54-55 of the remaining compounds, drawn to various organic compounds, classified in classes 514, 546, 544, 548, subclasses various.
 - IV. Claims 48-51, drawn to a method of using of different scope from the compounds, classified in class 514, subclasses various. If this group is elected, an election of a single disclosed species for a single disclosed method of using is required.
 - V. Claims 52-53, drawn to a method of using with additional antineoplastic agents, classified in class 514, subclasses various.
 - VI. Claim 56-57, drawn to a composition with one or more antineoplastic agents, classified in class 514, subclasses various.
2. The inventions are distinct, each from the other because of the following reasons:
3. Inventions I-III and IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP

Art Unit: 1625

§ 806.05(h)). In the instant case the products can be used as vasodialators as shown in FR2387956. Furthermore, note claim 54 claiming menopause use. Moreover group IV is of different scope from groups I-III.

The compounds of the groups I-III above are independent and distinct since they differ greatly in chemical structure. The above groups would not be classified together under a scientific mode of classification. The compounds of group I would not be a reference under 35 USC 103 against the compounds of group II. Further note that the heterocyclic moieties cannot be considered as conventional substituents, but rather form a new core of the molecule each time that they are present. Since no common core is present, the inventions are misjoined.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art (**note the proviso statement all teaches 102 compounds**), the evidence or admission may be used in a rejection under 35 USC 103 of the other invention.

Group V-VI have additional antineoplastic agents which may exert synergistic effect.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1625

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
